

CHAPTER 2

INVENTORY

CHAPTER 2 - INVENTORY

The purpose of the Inventory for the Nebraska Aviation System Plan is to provide accurate data for use throughout the study. Once compiled, the data collected creates a database that can be used by the Department for recording and tracking the facilities, activity, and conditions at airports throughout the State. In addition to compiling data on aviation activity, statistics, and services, the inventory also provides a means to present socioeconomic and demographic data that are used to evaluate the State's aviation demand. For this study, additional data were gathered through the implementation of two surveys to collect data on aviation uses and needs.

The following sections summarize the inventory efforts conducted as part of this Update.

AVIATION DATA

The Nebraska Department of Aeronautics has maintained a database of information on airports in the State for a number of years. The first step in the process to develop an accurate database for use in this analysis was to use this database as a starting point in compiling airport-specific summaries. These summaries were then mailed to the airports with a request for the airports to review the data and supply revisions and additional data for subsequent analysis in the NASP. At the outset of the study, the State had identified 90 airports and one seaplane base for inclusion in the NASP. This includes 86 publicly owned airports, four privately owned airports, and one seaplane base. **Exhibit 2-1** presents the airports and the major road network in Nebraska.

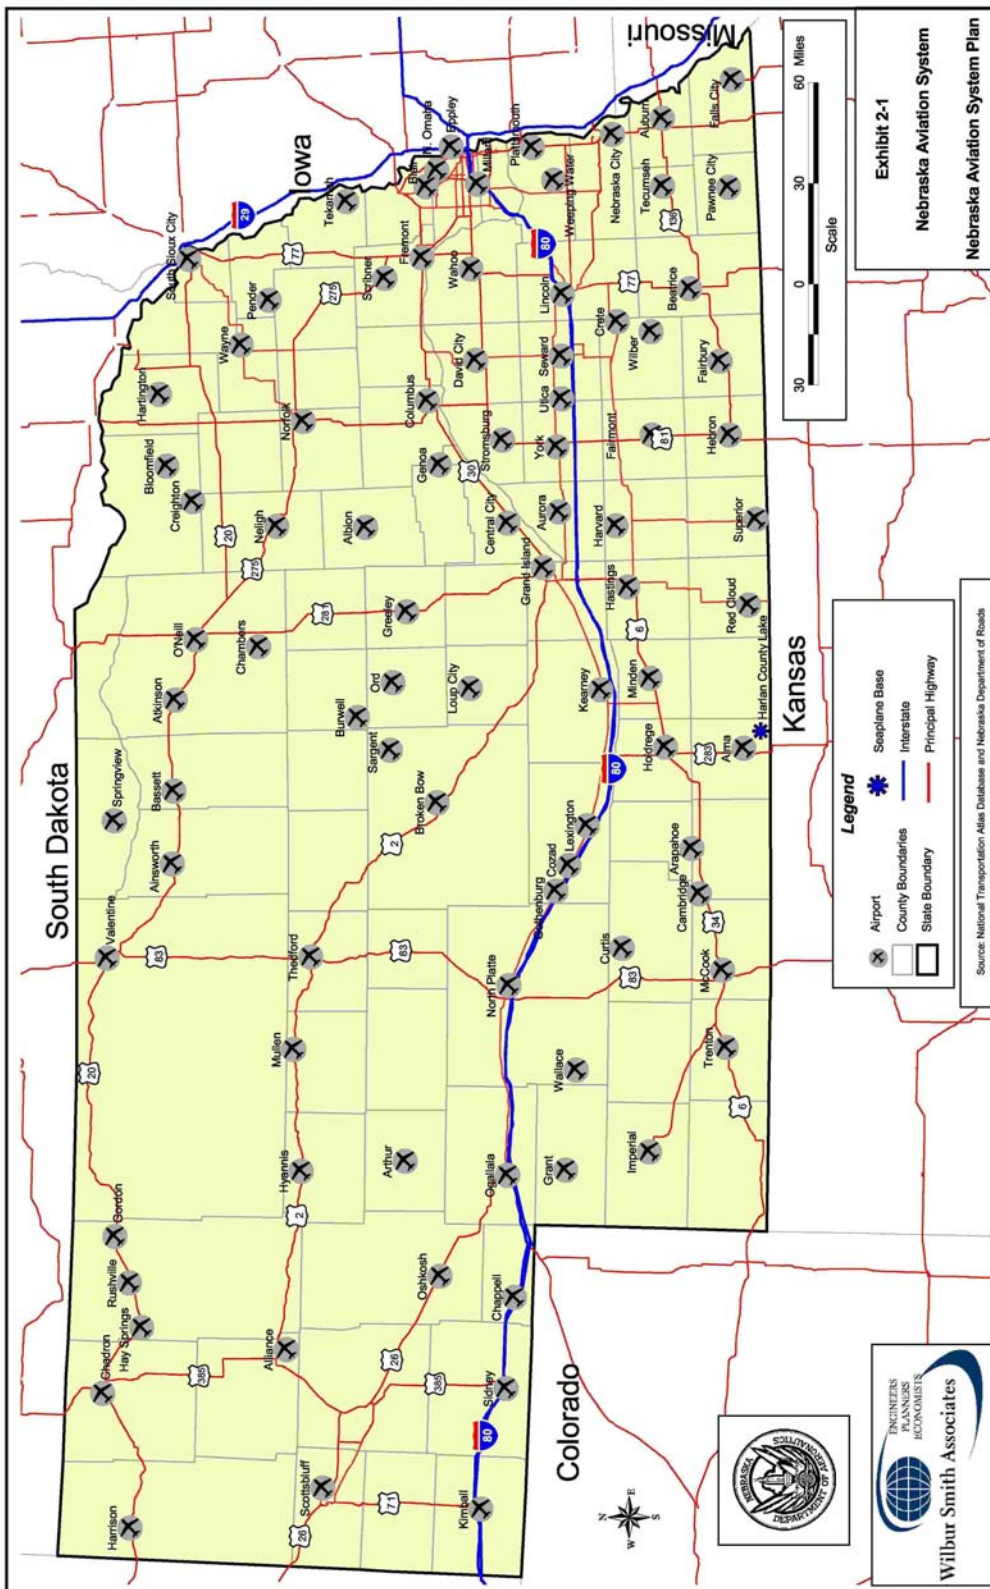

Data that were requested from all 90 airports included the following:

- ❑ Plan information (master plan/ALP) and date
- ❑ Available local funding
- ❑ Total based aircraft
- ❑ Total airport operations
- ❑ Total enplanements
- ❑ Current activity (1999 operations and based aircraft, by type)
- ❑ Airside facilities (primary runway & taxiway, secondary runway & taxiway)
- ❑ Landside facilities (building sizes and numbers, aircraft parking, auto parking, access)
- ❑ Fuel (number of tanks by type, capacity, fuel sales)
- ❑ Air cargo statistics (1999)
- ❑ Navigational aids
- ❑ Aviation services

Responses were received from 64 airports. For those airports that did not respond, the data contained in the Department's database were used.

For clarity purposes, all tables are organized according to associated city, then by airport name. Data are summarized in tabular format in **Tables 2-1** through **2-13** (these tables are presented at the conclusion of the text for Chapter 2).

Exhibit 2-1

SOCIOECONOMIC AND DEMOGRAPHIC DATA

To provide a backdrop for the analysis of the Nebraska airports, a review of socioeconomic and demographic factors was undertaken. These factors ultimately impact the demand for aviation facilities and services in Nebraska. The historical data presented in this section were obtained from sources such as the U.S. Bureau of the Census, U.S. Bureau of Economic Analysis, Nebraska Natural Resources Commission, U.S. Department of Labor, Bureau of Labor Statistics, and Nebraska Department of Labor.

POPULATION

In 1990, the U.S. Census placed the population of Nebraska at 1,578,417 residents. By 1999, the estimated statewide population of Nebraska had grown by 87,611 residents, and the State was ranked 38th in the United States, with a population of 1,666,028 people. Nebraska has experienced moderate population growth since 1990, with an average annual population growth rate during that time of 0.6 percent. **Table 2-14** (presented at the conclusion of the text of this chapter) identifies the population trends for Nebraska. **Exhibit 2-2** graphically depicts the population densities throughout Nebraska.

Between 1990 and 1999, 59 of Nebraska's 93 counties experienced an overall decline in population. Of the 14 counties that experienced a net increase in population, 13 counties grew at a rate equal to or greater than the State's average annual growth rate of 0.6 percent.

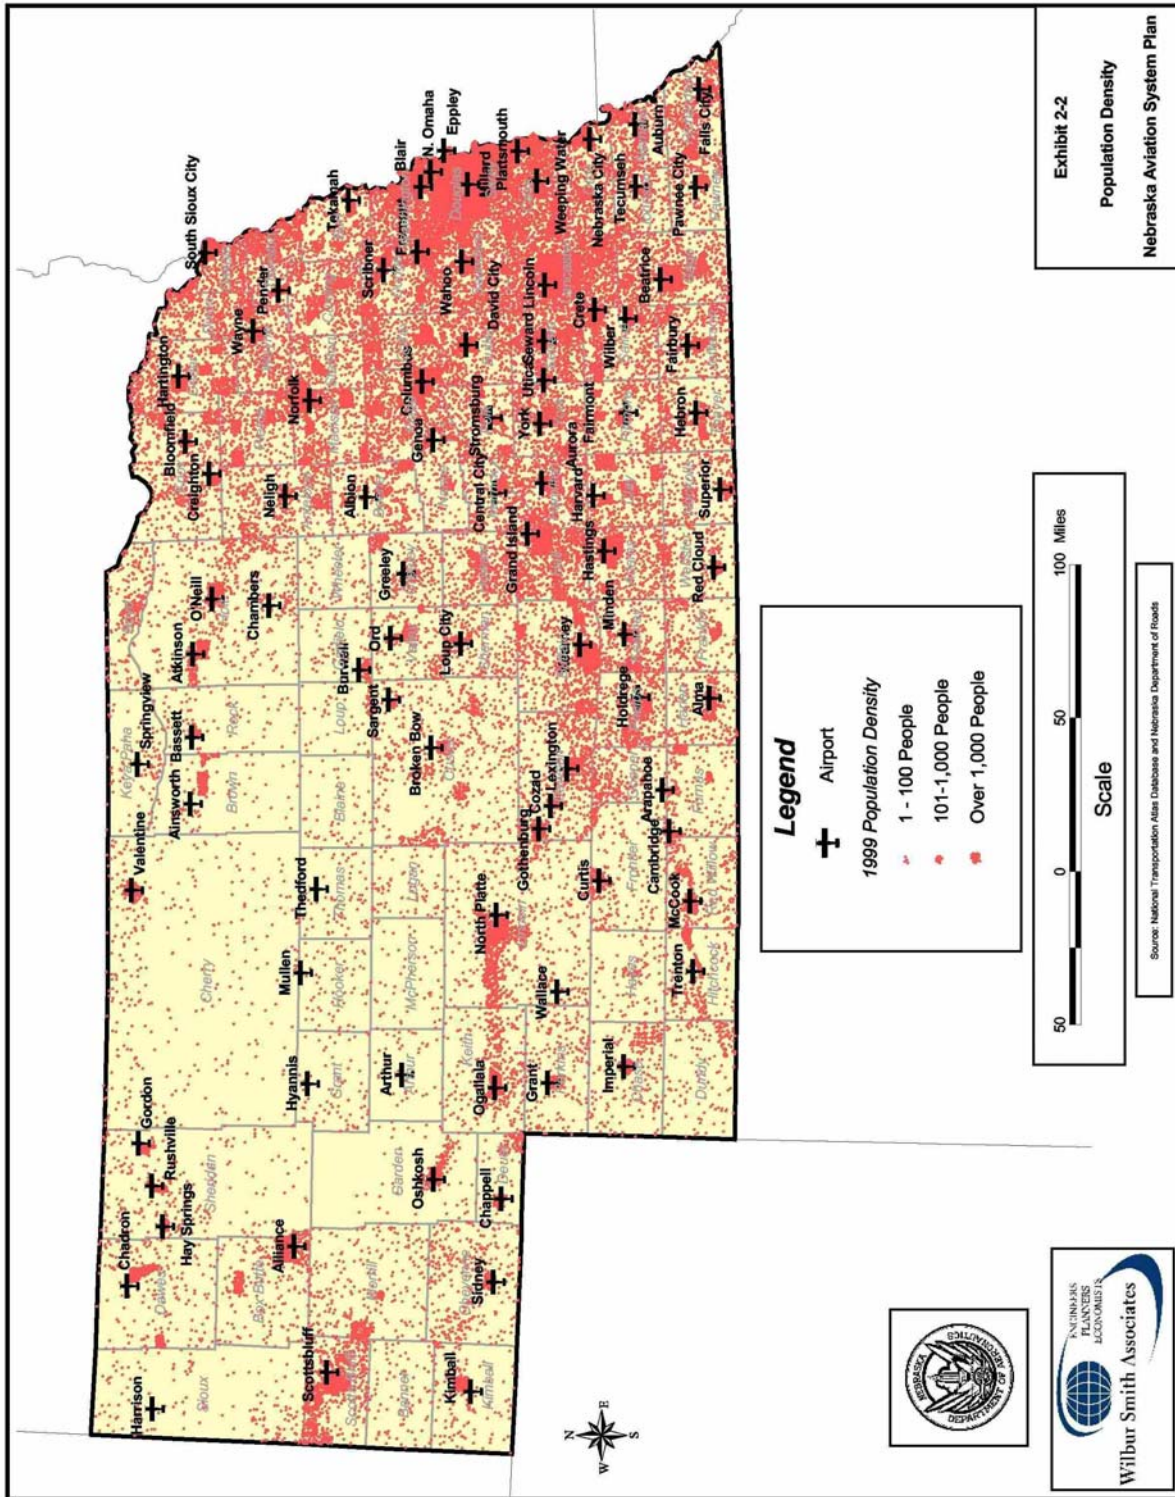

According to the estimated U.S. Census data for 1999, Douglas County was the most populated county in the State with 446,277 residents. Arthur County had the smallest population with only 412 residents. Sarpy County and Gosper County had the two highest average annual population growth rates for all of the counties in the State, with growth rates of 2.0 percent and 1.8 percent, respectively, between 1990 and 1999. In terms of actual population number growth, Douglas, Lancaster, and Sarpy counties experienced the most growth in population numbers over the period. Other areas of population growth include the counties located in eastern and southeastern Nebraska. Population growth can be attributed to the increasing residential and commercial development of agricultural land between Lincoln and Omaha. Meanwhile, in the western and central portions of Nebraska, population has declined at an average rate of between -2.0 percent to -1.5 percent per year. The counties that experienced the greatest losses in actual population numbers were Antelope, Holt, Nuckolls, and Valley.

Future population projections by the U.S. Census Bureau indicate that the population trends exhibited during the 1990s will continue throughout the 20-year planning period. Nebraska will continue to add population at a slightly higher growth rate than experienced in the 1990s. By 2010, the population of the State is expected to reach 1,807,793. By 2020, the number of residents in Nebraska is projected to increase to approximately 1,941,417, an average annual growth rate of 0.7 percent.

EMPLOYMENT

The Nebraska economy had a Gross State Product (GSP) over \$ 51.7 billion in 1998, which ranked 37th in the country. Nebraska's economy has historically been based upon manufacturing- and agricultural-related activity. In recent years, service industries have increased in employment and production, reflecting the same trends as the national economy.

EXHIBIT 2-2

Agriculture, agriculture services, farms, fishing, and forestry combined for a total of \$6.3 billion, or 12 percent, of Nebraska's Gross State Product in 1998. Comparatively, 1989 combined totals for the agriculture-related industry for Nebraska was \$6.4 billion, but accounted for 21 percent of the Gross State Product. The level of agricultural-related activity has remained constant in Nebraska, but the Gross State Product has been reduced by 45 percent.

In 1997, the total employment in Nebraska was over 640,000 people. The largest employment sector in Nebraska was the service industry, with approximately 220,000 employees. **Table 2-15** (presented at the conclusion of the text of this chapter) identifies the number of employees and the average annual wage for each industrial sector. **Exhibit 2-3** graphically depicts the employment densities throughout Nebraska.

The manufacturing and retail trade sectors have approximately 111,000 and 150,000 employees, respectively. The employment sector with the highest average wage (\$35,967) was the auxiliary sector. The employment sector with the second highest average wage (\$31,031) was the financial, insurance, and real estate industry. Employees in the retail trade sector had the lowest average wage in Nebraska (\$12,038). The 1997 average annual wage for all employment sectors in Nebraska was \$21,274. This is a 20% increase from the average annual wage of 1992, \$16,985.

According to the U.S. Department of Labor, the rate of unemployment in Nebraska as of August 2000 was 2.8 percent lower than the unemployment rate for the nation at 4.0 percent. Johnson and Thurston Counties, located in southeastern and northeastern Nebraska, respectively, had the highest unemployment rate at 10 percent. This is in contrast with Dundy, Franklin, and Sioux Counties, located in the southern and western portions of the State, which had an unemployment rate of 0.9 percent.

INCOME

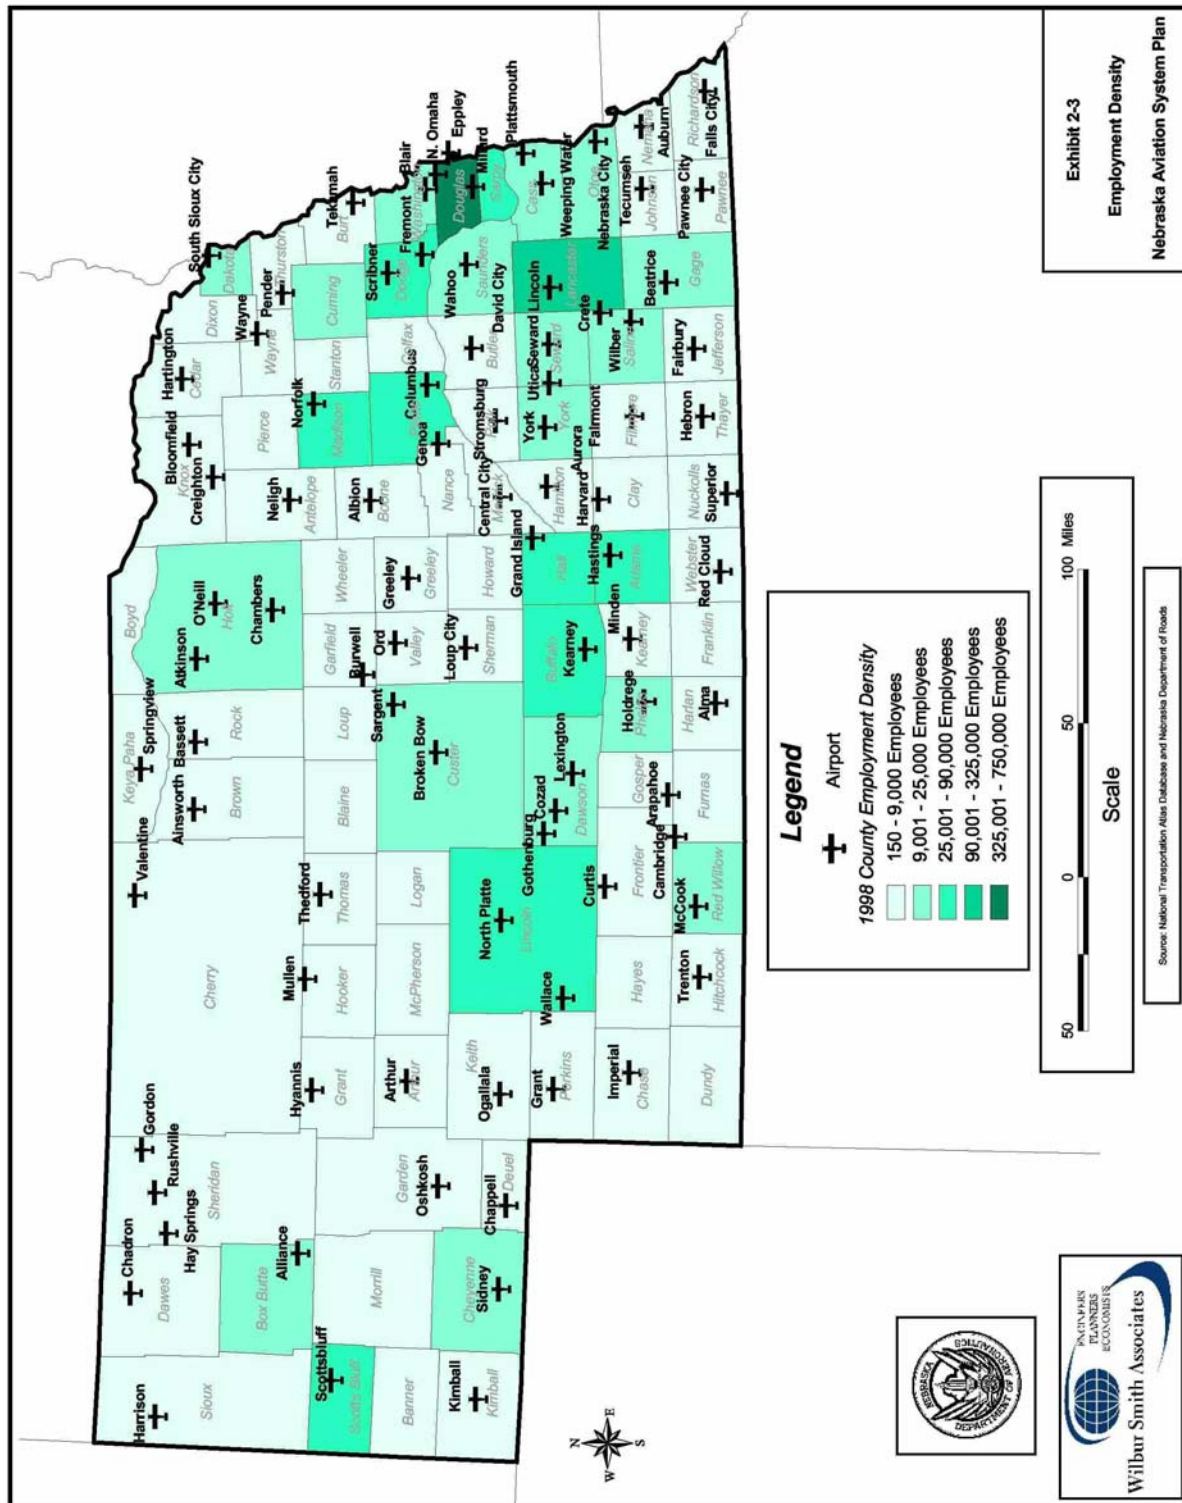

In 1998, Nebraska had a per capita personal income (PCPI) of \$25,924. This PCPI ranked 24th in the United States and was 95 percent of the national average, \$27,203. In 1988, the PCPI of Nebraska was \$15,984 and ranked 28th in the United States. The average annual growth rate of PCPI over the past 10 years was 5.0 percent. The average annual growth rate for the nation was 4.6 percent.

In 1998, Nebraska had a total personal income (TPI) of \$43,053,226.¹ This TPI ranked 36th in the United States and accounted for 0.6 percent of the national total. In 1988, the TPI of Nebraska was \$25,118,637 and ranked 34th in the United States. The average annual growth rate of TPI over the past 10 years was 5.5 percent. The average annual growth rate for the nation was 5.6 percent.

Total personal income (TPI) includes the earnings (wage and salary disbursements, other labor income, and proprietors' income); dividends, interest, and rent; and transfer payments received by residents of Nebraska. In 1998, earnings were 66.5 percent of TPI (compared with 67.9 percent in 1988); dividends, interest, and rent were 20.7 percent (compared with 20.6 percent in 1988); and transfer payments were 12.8 percent (compared with 11.5 percent in 1988). From 1988 to 1998, earnings increased, on average, 5.3 percent each year; dividends, interest, and rent increased, on average, 5.6 percent; and transfer payments increased, on average, 6.6 percent.

¹ All income estimates, with the exception of PCPI, are in thousands of dollars. Regional Economic Information System, Bureau of Economic Analysis, June 2000.

EXHIBIT 2-3

Earnings of persons employed in Nebraska increased from \$18,526,802 in 1988 to \$31,163,123 in 1998, an average annual growth rate of 5.3 percent. The largest industries in 1998 were services, 24.8 percent of earnings; state and local government, 12.4 percent; and transportation and public utilities, 9.7 percent. In 1988, the largest industries were services, 19.1 percent of earnings; state and local government, 12.6 percent; and transportation and public utilities, 10.0 percent. Of the industries that accounted for at least 5 percent of earnings in 1998, the slowest growing from 1988 to 1998 was farm (5.4 percent of earnings in 1998), which decreased at an average annual rate of 0.5 percent; the fastest was services, which increased at an average annual rate of 8.3 percent.

SURVEYS

Surveys of businesses and medical facilities were conducted as part of the NASP to gather additional information on aviation demand and needs in Nebraska. These two surveys and their findings are discussed in the following sections.

BUSINESS SURVEY

A business survey was conducted to help identify travel patterns, determine reliance on aviation, and evaluate the importance of aviation to location decisions for businesses that rely on Nebraska's commercial service and general aviation airports. Data was sought regarding scheduled commercial airline service, general aviation services, air cargo activity, and other services.

The business survey questionnaire was developed and mailed to 500 selected businesses in Nebraska. The business survey was conducted in the summer of 2000. Of the total mail-out, 119 surveys were returned. This resulted in a response rate of 23.8 percent for the business survey. Normal response rates for random, mail-out business surveys generally range from 18 to 28 percent.

The questionnaire initially asked for information regarding the company name and address, as well as the type of business product or service. Businesses responding to the survey covered a wide spectrum of employment types and included manufacturers, construction, service industries, banking and finance, government and non-profit organizations, retail sales, agriculture, and international trade. The survey also requested information on the number of employees, 1999 total annual gross sales, and 1999 total annual payroll. Of the 119 respondents that answered the question concerning employment, a total of 25,156 full-time and 2,599 part-time employees were represented in the survey results. Businesses that replied to the survey had a combined payroll of \$1.6 billion and gross sales of approximately \$6.0 billion.

The statewide survey results are presented below, by numerical question.

1. Please estimate the total number of airline trips per year taken by your company's employees:

Approximately 82 percent of the respondents indicated they use scheduled airline service for company business. Approximately 18 percent of the responses received indicated that they did not use airline service. Respondents indicated that they make a total of 18,197 trips per year.

2. Where do your company's employees typically begin airline service trips (please check all that apply)?

The survey provided space for the respondent's first three choices of airports to begin their scheduled airline trips and the percentage of use of each airport. When the number of trips is applied to the percentage use of the various airports identified by the survey respondents, the airports that served the majority of the respondents were as follows:

- ☐ Omaha 73%
- ☐ Lincoln 23%
- ☐ Denver 1%

Other airports that were identified as being used by the survey respondents, but that accounted for less than 1 percent of the total trips for the respondents, included the following:

- ☐ Alliance
- ☐ Grand Island
- ☐ Kearney
- ☐ McCook
- ☐ North Platte
- ☐ Scottsbluff
- ☐ Sioux City
- ☐ Chadron
- ☐ Chicago
- ☐ Kansas City
- ☐ Norfolk
- ☐ Sioux Falls

As part of this question, businesses were also asked to identify the top three destinations for their employees. Chicago was the number one destination by businesses, followed closely by Washington, D.C., Denver, and Las Vegas. The number two destination chosen by businesses was also Chicago, followed by St. Louis. The third destination chosen was also Chicago, followed by Dallas and Atlanta.

3. Approximately what percent of your company's employment and sales is related to the availability of scheduled commercial air service in Nebraska?

The purpose of this question was to quantify the direct relationship between employment and sales to the availability of scheduled commercial air service. This relationship differed by location and level of available air service. However, throughout the entire State, businesses perceive the important need for airline service and connectivity to clients and vendors. The quantified results to this question are as follows:

- ☐ Employment: 6.24% (3,219 full- and part-time workers)
- ☐ Gross Sales: 12% (\$712 million)

4. How long would you be willing to drive to reach a commercial service airport for a business trip?

To answer this question, the businesses were given the following four choices to choose from:

- ☐ 0-30 minutes
- ☐ 30-60 minutes
- ☐ 60-90 minutes
- ☐ over 90 minutes

The majority of businesses (38 percent) responded that they would drive over 90 minutes to gain commercial service access. Approximately 30 percent of businesses chose 30-60 minutes. Roughly 18 and 14 percent of responding businesses chose 0-30 minutes and 60-90 minutes, respectively.

5. Does your company:

This question contained 4 parts; the responses are as follows:

a. Own general aviation aircraft?

Approximately 8 percent of the respondents indicated they do own general aviation aircraft.

b. Use charters or air taxis on a regular basis?

Approximately 12 percent of the businesses that responded noted that they use charters or air taxis on a regular basis.

c. Lease a general aviation aircraft?

Approximately 4 percent of the responding businesses answered that they lease general aviation aircraft.

d. If you answered yes to any of the above questions, please estimate the number of annual aircraft operations (takeoffs and landings) by Nebraska airports that you conduct and the aircraft type used?

The top five Nebraska airports used for general aviation services as noted by responding businesses are Grand Island, Kimball, Lincoln, Omaha-Eppley Airfield, and Nebraska City, in order of high to low. The respondents to this question accounted for a total of 605 operations per year collectively. The types of aircraft used ranged from single engine Cessna 152s to Beech King Airs.

6. How long would you be willing to drive to reach a general aviation service airport for a business trip?

To answer this question the businesses were given the following four choices to choose from:

- ☐ 0-30 minutes
- ☐ 30-60 minutes
- ☐ 60-90 minutes
- ☐ over 90 minutes

The majority of businesses (53 percent) responded that they would drive 0-30 minutes to gain general aviation airport access. Approximately 20 percent of businesses chose 30-60 minutes. Approximately 14 and 13 percent of businesses chose over 90 minutes and 60-90 minutes, respectively.

7. Do any of your clients or vendors use general aviation to visit your local business site?

Approximately 20 percent of the businesses responded that their clients or vendors use general aviation for business trips. Of the respondents who provided company names and locations for their clients or vendors, the locations varied from Japan to domestic locations such as Chicago and Miami, and included several Nebraska cities such as Lincoln, Wayne, and Hubbard. Overall, the respondents noted approximately 100 air trips per year from clients or vendors who use general aviation to visit their local business site within Nebraska.

8. Approximately what percent of your company's employment and sales is related to the availability of general aviation service in Nebraska?

The purpose of this question was to quantify the direct relationship between employment and sales to the availability of general aviation service. This relationship differed by location and level of available air service. However, throughout the entire study region, businesses perceived the important need for airline service and connectivity to clients and vendors. The quantified results to this question are as follows:

- ☐ Employment: 1.1% (291 full- and part-time workers)
- ☐ Gross Sales: 4% (\$2 million)

9. Does your company utilize air cargo/package express services?

Nearly 62 percent of businesses replied that they do utilize air cargo/package express services. This represents approximately \$4 million spent on air cargo/package services in 1999.

10. If your company were considering expansion or relocation, how important would the following factors be to your decision-making process? Businesses were asked to rate the following 13 categories on a scale of 1-10 (1 being very unimportant and 10 being very important), considering if the business was going to expand or relocate.

Answers were averaged together and are rated below, with the most important category first. As shown, businesses consider the most important factor when relocating to be convenient highway access, followed closely by the availability of a trained workforce. Proximity to a commercial service airport placed fifth in importance, and proximity to a general aviation airport came in ninth in importance.

- | | |
|--|------|
| <input type="checkbox"/> Convenient highway access | 8.21 |
| <input type="checkbox"/> Availability of a trained workforce | 7.85 |
| <input type="checkbox"/> Availability/Cost of Utilities | 7.53 |
| <input type="checkbox"/> Tax Incentives | 7.39 |
| <input type="checkbox"/> Proximity to a Commercial Service Airport | 6.10 |
| <input type="checkbox"/> Academic or cultural centers | 5.75 |
| <input type="checkbox"/> Proximity of suppliers | 5.64 |
| <input type="checkbox"/> Closeness to an urban/business district | 5.19 |
| <input type="checkbox"/> Proximity to a general aviation airport | 4.72 |

<input type="checkbox"/> Natural Resources	4.69
<input type="checkbox"/> Historic location of Business	3.94
<input type="checkbox"/> Rail transportation facilities	3.44
<input type="checkbox"/> Water transportation facilities	3.23

11. Have there been instances where a lack of airport facilities in Nebraska has influenced business decisions?

Of the 119 respondents, approximately 77 percent indicated that a lack of airport facilities has not influenced their business decisions.

12. Please list any services or facilities that you feel are needed at Nebraska airport(s) and the specific facility at which they are needed.

On a region-wide basis, respondents had suggestions or comments regarding the local airports and their air service. Most comments reflected a greater need for commercial service flights, more jet service, and more flights to the eastern part of the United States. The comments received in this section will be considered in the evaluation of airport-specific needs in subsequent analyses.

MEDICAL FACILITY SURVEY

The purpose of the hospital survey was to obtain information related to the use of airports and general aviation aircraft by hospitals and doctors to reach all areas of Nebraska. Information that was gathered included whether or not the hospital had a specialty clinic, how often specialty clinics were conducted, where specialists come from, how they arrive, and whether or not the hospital has a helipad. Hospital administrators were also asked to explain if any other aviation uses were connected to the hospital, and if any improvements could be made to the airports that the hospital uses on a regular basis.

Questionnaires were mailed to 103 hospitals. A total of 72 responses were received, resulting in a response rate of approximately 70 percent. This response to a mail-out survey is considered outstanding.

The hospital survey results are presented below, by numerical question:

1. Does your facility have specialty clinics? If yes, how many different specialists use the facility each month? How often are the specialty clinics held in your facility? Where do the specialists come from? How do the specialists arrive in town?

Roughly 98 percent of the facilities answered that they have specialty clinics. Overall, the responding hospitals noted that they have 785 specialists that arrive per month for specialty clinics and that specialty clinics are held a total of 873 times per month. This results in an average of 13 different outside specialists that use their facilities per month. The responding hospitals averaged 15 different specialty clinics per month at their facilities. The specialists came mostly from Lincoln, Omaha, and Grand Island, but Denver, St. Louis, and Rapid City were also mentioned by the responding hospitals. The majority of specialists arrive by car (79 percent), followed by airplane (20 percent), and other (less than 1 percent).

2. Does your facility have a helipad? If yes, how often is the helipad used?

Approximately 69 percent of the hospitals responded that they have a helipad. On average, the helipad is used 6 times per month.

3. In the last 6 months, patients have been transferred by the following means:

- | | |
|--|------------|
| <input type="checkbox"/> By helicopter from the facility's helipad | 10 percent |
| <input type="checkbox"/> By helicopter from the local airport | 4 percent |
| <input type="checkbox"/> By airplane from the local airport | 6 percent |
| <input type="checkbox"/> By ambulance or other vehicle | 80 percent |

4. Please describe any other aviation uses connected to your facility.

Most of the hospital respondents indicated there are other aviation uses connected with the hospital. The uses most often noted included speakers, special occasions, meetings and sharing medical tips. Other uses that were mentioned included a traveling consulting pathologist, patient transfer, and physicians continuing education in other towns and cities.

5. Please describe any additional aviation facilities or system needs that are not being met. Please be specific and provide a source, if possible.

Common requests were better instrumentation; indoor facilities at airports open later in the evening, and a statewide EMS.

6. How many beds does your facility have? How many physicians work out of your facility?

Hospitals in Nebraska range in amount of beds from 13 to 390 beds. The average number of beds per hospital was 65. The number of physicians ranged from 1 to 890, with an average of 31 doctors at each facility.

HISTORICAL AIRPORT DEVELOPMENT AND FUNDING

The majority of development at public-use airports in Nebraska has been related to federally driven legislation and funding. It is important to note that while airport funding legislation is presented in the following discussion, the flow of funds for improvements to navigational aids does not typically correspond with the flow of funds for airport development. The reason for this is that navigational aids have typically used a separate funding stream, much like entitlements or money for annual operations.

Table 2-16 depicts the history of Nebraska's public-use airport sites in terms of when they opened or were closed, when the primary runway was paved, and if the runway was lighted. This history provides a snapshot of how the Nebraska airport system has developed over time.

Source: Nebraska Department of Aeronautics (revised December 26, 2001)

The time periods of airport development funding programs are outlined below with additional information regarding national and state aviation development:

1926-1932 The Air Commerce Act of 1926 provided for aeronautical facilities, but no funding for airports. The Air Mail (Kelly) Act of 1925 provided funding to contractors to fly the mail. These companies, including the Boeing Air Transport Company, serving most of Nebraska, made arrangements with local airports for facilities. This resulted in an indirect flow of federal funds to establish airport facilities.

Airports were established in many Nebraska communities to serve the transcontinental air mail route, which stretched from Chicago to San Francisco with stops in Omaha, North Platte, and various intermediate fields along the route. An interesting note is that some cities such as Big Springs, Sutherland and Overton had auxiliary fields that were eventually closed, while others such as Lincoln and Ogallala remain to this day.

A publication entitled “Airports and Established Landing Fields,” produced in 1934 by The Airport Directory Company, listed 23 municipal or auxiliary fields. A few of these airports such as Hastings, Ogallala and Norfolk were located on the sites they now occupy to this day. Many others were to be interim locations in their community until moved to their present location such as Alliance, McCook, and Sidney.

1933-1939 In 1933, the Airport Development Program was created with the help of the Civil Works Administration. Beginning in 1935, the Works Progress Administration (WPA) began to assist the airport development efforts. The 1938 Civil Aeronautics Act included funding for airports. From a national standpoint, there were 823 municipal airports in 1927 and 1,833 in 1938 as a result of the federal relief program. In 1939, there were only 69,729 pilots in the nation.

By 1939, an airways navigational aid network was completed including 231 radio range stations. Nebraska participated in a program of air-marking towns to provide pilots a visual aid to navigation. The marking was done on a large roof in towns and consisted of the name of the town, an arrow, and distance to the nearest airport. The marking was discontinued during the war, but resumed in the late 1940s and continued into the 1950s.

In a 1938 WPA-directed plan, Nebraska listed 31 existing airports and a network of visual and electronic navigational aids such as air-marked towns and radio range stations. The Department of Aeronautics records show that by the end of the 1930s Nebraska had 33 public-use airports, three of which were paved and 11 lighted. In addition, three were either converted to private-use or closed by the end of the decade.

1940-1944 Two programs were created for airport development for the purpose of national defense and training civilian pilots. Over this period, the programs provided \$392 million for 564 airport projects. The programs were the Development of Landing Areas for National Defense (DLAND) and Development of Civilian Landing Areas (DCLA). The funding came from appropriations to the Civil Aeronautics Authority with construction work carried out through the WPA, War, and Navy departments. In addition, the Civilian Pilot Training Program existed from 1938 until 1944 (name changed to War Training Service in 1942) and was credited with training over 300,000 pilots. By 1944, there were 181,378 licensed pilots in the nation.

Navigational aids were improving with the development of the Instrument Landing System (ILS) in 1940 and experiments with VHF Omnidirectional Ranges (VOR) in 1941. Based on these developments, approach minimums began to be lowered in 1947.

In Nebraska, there were 12 airfields constructed to train troops for World War II. These included facilities at Ainsworth, Alliance, Bruning, Fairmont, Grand Island, Harvard, Kearney, Lincoln, McCook, Omaha (Fort Crook), Scottsbluff, and Scribner. Omaha (Fort Crook) is now Offutt Air Force Base and Bruning and McCook were eventually closed. All other facilities continue to be the principle airports serving these communities.

In addition, the WPA directed other airport projects in Nebraska including Beatrice, Fremont, Chadron, Norfolk, North Platte, Clay Center, Hastings, and Omaha.

During the 1940s, 65 Nebraska public-use airports opened, while 11 were either converted to private-use or closed. Initial runway paving was completed at 17 airports and initial lighting was installed at 13 airports.

1947-1970 In 1946, the Federal Aid Airport Program (FAAP) was created and authorized for seven years with \$525 million authorized. Nationwide by 1969 there were 6,710 public-use airports. 3,684 of these, or 55 percent, were publicly owned, while the remaining 45 percent were privately owned. By 1947, licensed pilots in the nation jumped to 433,241 and by 1970, that number was 732,729. In 1960, 18 percent of pilots were instrument rated and by 1970, 23 percent were instrument rated.

In 1947, VORs began to replace radio range stations and by 1950, the first VOR ‘Victor’ Airway was established. In 1955, Nebraska became the first state to install and maintain VORs to supplement federal navigational aids. The first three installations were at Alliance, Ainsworth, and Norfolk. In 1959,

Nebraska added ‘H’ (Homer) beacons, later known as Non-Directional Beacons (NDB) to further enhance the airways system in the State.

In the 1950s and 1960s, 68 Nebraska public-use airports were opened and 39 were either converted to private-use or closed. Initial runway paving was completed at 31 airports and initial lighting was installed at 52 airports.

1971-1981 In 1970, the Airport Development Aid Program (ADAP) and Planning Grant Program were created to provide grants for airport projects. In addition, the Airport and Airway Trust Fund was created. By 1981, there were 5,846 public-use airports in the nation. 3,995 of these airports, or 68 percent were publicly owned and the remaining 32 percent were privately owned. The number of licensed pilots in the nation reached an all-time high of 827,071 in 1980 and then began a slow decline in 1981, recording 764,182.

In the 1970s, 15 new public-use airports were opened in Nebraska and 17 were either converted to private-use or closed. 24 airports had their runways initially paved and 12 airports were initially lighted.

1982-2000 In 1982, the Airport Improvement Program (AIP) was created and has been subsequently reauthorized numerous times through the present. By 2000, there were 5,041 public-use airports in the nation. 4,016, or 79 percent, were publicly owned and the remaining 21 percent were privately owned. During this time, the licensed pilots dropped to a low of 616,342 in 1997 and by 2000, 625,581 were recorded. Of the total pilots, 50 percent are instrument rated.

Beginning in 1978, the FAA began testing a replacement to ILS and chose the Microwave Landing System (MLS). Due to rapid technological advances, the FAA has since terminated that plan and chosen a system using the Global Positioning System (GPS) as the future basis for en route and approach navigational aids. The ILS, VOR, and NDB systems remain in place until the GPS is certified as fully operational for the necessary approach minimums. In 1989, the FAA and National Weather Service (NWS) began installation of Automated Surface Observation Systems (ASOS) and Automated Weather Observation Systems (AWOS), which are essentially the same type of systems, to analyze and report surface weather conditions. This system eventually replaced the human observer at airports. Nebraska began installation of AWOS systems in 1991 as a supplement to the federal system.
